

ELECTRICAL TESTING

Low- & High voltage, DUT control & signal logging

OVERVIEW OF OUR SERVICES

Thermal Management System Design

for heating and air conditioning systems, electric powertrains, battery systems, etc.

Component Testing

e.g. endurance testing for battery cooling, air conditioning, filtration systems, etc.

Thermal Management Applications

for climate control systems, battery cooling systems, electric drive systems etc.

Test Design & Validation

e.g. test case design for the validation of climate control and cooling systems

High /Low Temperature & Temperature Cycle

Temperature storage, temperature cycling & thermal shock testing from -70 °C to +240 °C
